

Things to know about waterproof protection

HTC Desire EYE meets the IPX7 waterproof standard. This means that if you accidentally drop this phone in water, it is protected from water under these conditions:

- The nano SIM and microSD covers are closed firmly. (See previous page for details.)
- The phone is immersed in plain tap water within 1 meter deep and for less than 30 minutes.

In addition to the above, take the following precautions to help protect the phone:

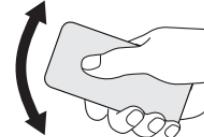

- Avoid immersing the phone or letting the USB port and headset jack come in contact with liquid chemicals such as liquid soap or detergent. Also, never immerse the phone in sea water, the swimming pool, hot springs, or any liquid besides water (such as alcohol).

In case the USB port and headset jack have had contact with salt water or liquid chemicals, rinse using fresh water. These contaminants may damage the connector pins.

- If the USB port and headset jack got wet, hold the phone firmly and shake off the water from each port. Make sure to let the ports dry completely before using the phone.
- Keep the phone away from sand.

See the user guide for more details on waterproof protection for HTC Desire EYE.

Want some guidance on using your phone?

On your phone, check out our friendly walkthroughs in the **Tips & Help** app. For self-help in troubleshooting basic problems, you can use the **HTC Guide** app. Or go to www.htc.com/support/ to find tutorials, the user guide, FAQs, latest news, and more.

Please also read the Safety and regulatory guide that's included in the box.

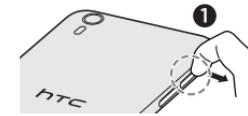

HTC Desire EYE

Inserting your nano SIM and storage cards

IMPORTANT: USE A STANDARD NANO SIM ONLY.

Don't cut a micro SIM or regular SIM card and insert it into the nano SIM slot. It's thicker than the standard nano SIM card and may get stuck in the slot.

Make sure your phone is off. With the phone facing up, the nano SIM and microSD™ slots are on the left.

1. With the phone facing **down**, insert your fingertip in the small nano SIM tray slot opening, and then pull the tray out.

2. Make sure the nano SIM tray is facing **up** so that the nano SIM card doesn't accidentally fall out when you insert the card.

- Place your nano SIM card into the tray, with the gold contacts facing up and cut-off corner facing out.

3. To reinsert the nano SIM tray, center it first in the slot, and then slide it all the way in.

htc.com

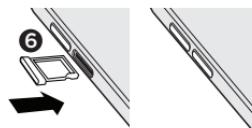

4. With the phone still facing down, insert your fingertip in the small microSD tray slot opening, and then pull the tray out.

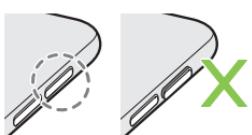

5. Flip the phone over. With both the phone and the microSD tray facing **up**, place your microSD card into the tray, with the gold contacts facing down.

6. To reinsert the microSD tray, center it first in the slot, and then slide it all the way in.

To prevent water from entering the slots:

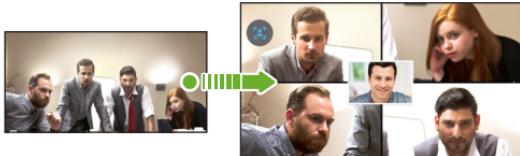

After sliding the nano SIM and microSD trays into the slots, slide your finger several times across the cover that's attached to the tray, to ensure that it's closed evenly and firmly. Make sure the cover doesn't protrude from the side.

The HTC Eye Experience

The new HTC Eye Experience features take you beyond simple picture taking and sharing. It combines the front and back cameras to create amazing photos and videos, and enables face tracking and screen sharing in video calls.

In a video call, the camera will track you and the people with you

Face Tracking can detect not just you but also the people around you during a video call. Your caller will see up to 4 faces that are within your camera's field of vision.

Share your phone screen

If you need to show something on your screen during a video call, you can with Screen Share.

Both sides of the story

Record the action in front of you and yourself at the same time with Split Capture.

Blend faces with anyone

Wonder what you would like as another person?

Try out Face Fusion, and combine your selfie with someone else's photo.

Look good in an instant

Want to let the camera automatically touch up your face before taking a selfie? Live Makeup does it for you in real time.

Taking selfies just got a whole lot easier

Auto Selfie and Voice Selfie make it a snap to take selfies. Flash a smile, and the camera instantly captures your smiling face. Or, just "Say Cheese"!

Your mobile photo booth

Use Photo Booth to capture and merge 4 selfies into a single picture for easy sharing.
